

Clean in place (CIP)

Why Choose a Sycamore CIP set?

Whatever your CIP requirements, Sycamore Process Engineering are experts in CIP and can provide a solution. From a single tank, single channel manual system through to a multi-tank, multi-channel, fully automated system - we can deliver!

Key features and benefits

- **ERGONOMICS**
Designed to ensure routine maintenance can be carried out quickly, effectively and safely minimising clean time and labour involved.
- **INCREASE CLEANING CONSISTENCY**
Duplicate the exact solution and method every time.
- **SAVE MONEY**
Cut your operational costs through efficient use of detergents and water without compromising on cleaning standards.
- **BESPOKE DESIGNS**
Tailored to suit specific requirements considering product composition, footprint available and customer standards.
- **OPTIMISE AND MONITOR**
Easily ensure the correct temperature, contact time, flow rates and chemical strengths are used and recorded every clean.
- **IMPROVE PLANT HYGIENE**
Effectively reach and clean objects which cannot be reached by any other means with a CIP system.

Clean in place (CIP)

With over 30 years experience in hygienic process operations, we can help your business meet and exceed industry standards.

We are also certified ISO 9001 so quality and peace of mind is guaranteed.

What our customers say

"Communication from the beginning of the project right through to completion and analysis was excellent and constant. All questions were answered promptly. Any changes or modifications to meet customer requirements were met with no issues."

"Having Sycamore as one of our major partners has been key to delivering this project to a high standard within a tight timescale. They have worked with us collaboratively to deliver an exceptional processing facility that will produce high quality products for years to come."
